

INDRA GROUP SIGNS A COLLABORATION AGREEMENT WITH ENGINEERING CONSULTANCY TRESCA TO LAUNCH DRONE FACTORY IN LEÓN

- Indra incorporates Tresca into its global supply chain, leveraging its engineering services focused on the deployment of industrial infrastructure and processes
- Indra is setting up multiple manufacturing facilities across Spain to accelerate the production of critical defence systems such as drones, radars and military vehicles

Madrid, 11 March 2026. Indra has signed a memorandum of understanding with León-based engineering consultancy Tresca to incorporate the company into its global supply chain and leverage its product and development capabilities both in Spain and internationally.

Among the first collaboration opportunities identified is the launch of the new drone factory in León, a strategic project to which the consultancy could contribute by providing specialised technical services for the deployment of industrial infrastructure.

This collaboration forms part of Indra's strategy to consolidate a strong and geographically distributed defence industry ecosystem, aligned with the objectives of technological sovereignty in high value-added sectors such as drones, air defence systems and land vehicles, among others.

José Andrés González Para, Director of Engineering at Indra, stated: "We are strengthening our industrial capabilities at a very rapid pace across the country, and we need to rely on companies like Tresca, which have the professionals and talent we are looking for to achieve this objective more quickly and with the required levels of rigour, excellence and quality."

Francisco Carro, Chief Executive Officer of Tresca, said: "Working alongside Indra represents our definitive consolidation in the defence sector, in which we were already active. We are joining the defence industrial base at a particularly important moment, both to equip Spain and Europe with the capacity to produce more and faster, and to seize the business opportunities that are emerging while generating local employment."

Tresca Ingeniería has more than 25 years of experience in complex technical projects for the energy, oil & gas, mining, chemical, pharmaceutical, mechanical and automotive sectors. This track record makes the company a relevant partner to support Indra during the initial phases of factory definition, design and deployment.

The future drone factory in León will be located in the Villadangos del Páramo industrial estate and forms part of Indra's industrial roadmap to meet growing demand for unmanned aerial systems and loitering munitions. Once fully operational, the facility is expected to generate around 200 jobs.

Through this agreement, Indra reinforces its commitment to collaboration with Spanish companies, particularly SMEs and specialised firms, fostering a competitive, innovative industrial ecosystem with strong territorial roots.

About Indra Group

Indra Group (<https://www.indragroup.com/>) is Spain's leading multinational company and one of the foremost defence and advanced digitalisation companies in Europe. It holds a leading position in the defence, space, air traffic management, mobility and transformational technologies businesses through Minsait, and integrates its sovereign AI, cybersecurity and cyberdefence capabilities under IndraMind. Indra Group promotes a safer and more connected future through innovative solutions, trusted relationships and top talent. Sustainability is an integral part of its strategy and culture, addressing current and future social and environmental challenges. At the close of fiscal year 2025, Indra Group reported revenues of €5.457 billion, with a local presence in 46 countries and commercial operations in more than 140 countries.
