

WHAT CAN YOU SEE AT THE INDRA GROUP STAND AT THE MOBILE WORLD CONGRESS 2026?

We know that during Mobile World Congress every minute counts. For this reason, we want to invite you to visit our stand and discover an experiential showroom where technology is shown in action, applied to real cases of maximum operational demand.

This year we are bringing to Barcelona a highly visual and demonstrative proposal to understand how our solutions work when everything happens at once: data, sensors, communications and decisions in real time.

In addition, to learn first-hand about some of our news, on Monday, March 2, at 12:30 p.m., **Ángel Escribano, president of Indra Group**, will be available to attend to the media on a guided tour of the IndraMind immersive room.

What will you find at the stand?

- **Immersive Showroom: IndraMind in Action**

From swarms of drones coordinating in complex scenarios to intelligent maritime surveillance. A journey to learn how connected solutions work in practice applied to security, natural disasters or conflicts.

- **A Formula 1 car: Alpine F1 single-seater**

Yes, an F1 on the stand.

Experts will explain how data is managed in major sporting events: capture, real-time analysis, critical communications and decision-making under pressure. A direct parallel with the operational management of critical infrastructures, air traffic or comprehensive security.

- **Drones and autonomous operations**

Demonstrations on unmanned platform coordination and advanced capabilities in autonomous systems, including VTOL (vertical take-off and landing) air units and solutions applied to surveillance, protection and operations in complex environments.

- **Satellite and space communications systems**

Key technology to ensure secure and resilient connectivity.

Secure communications, Earth observation, satellite navigation and space surveillance, including the VORAX satellite platform, designed for the detection and neutralization of unmanned aerial systems.

- **Advanced Robotics – Quadruped Robot with AI**

The stand includes the demonstration of a quadrupedal robot, equipped with control software and artificial intelligence, capable of responding to interactions with the environment and humans, both digitally and autonomously.

Minsait will also show its portfolio of digital solutions in AI & Data, Cloud and Cybersecurity, and through Nae it will advance the telco trends that will mark the MWC, such as the resilience of the operator model, satellite-Direct-to-Cell integration and advanced network automation.

The stand is conceived as a space to see, touch and understand how all these capabilities are connected in real solutions that are already operational. If you are interested in organizing a guided tour or meeting with our experts, we will be happy to welcome you.

And in case you want to attend the visit with Ángel Escribano, please confirm assistance to register.
