

## INDRA GROUP AND NDI EXPAND THE LPR PILOT AND CREW TRAINING CENTER IN WARSAW

- Indra Group will equip the Polish Air Medical Service (LPR) pilot training center with a Level D Full Flight Simulator (FFS) for the EC135 P3 helicopter, with the option to configure it for the P2+ version
- The project also includes the construction of a new training center building and the refurbishment of the existing FTD simulator hall
- The simulator will feature a Roll-in/Roll-out capability, enabling the future integration of additional cockpits for new LPR helicopters

**Madrid, May 28, 2026** – Indra Group, together with the Polish construction company NDI, will carry out the expansion and modernization of the LPR (Polish Air Medical Service) pilot and crew training center, under the Polish Ministry of Health, which will be equipped with a new EC135 helicopter simulator developed by Indra Group.

The contract includes the delivery of a Level D Full Flight Simulator (FFS) for the EC135 P3 helicopter, with configuration for the P2+ version, the construction of a new training center building, the refurbishment of the existing FTD simulator hall, and post-delivery maintenance support.

The simulator will incorporate Roll-in/Roll-out functionality, allowing additional cockpits for new helicopters in the LPR fleet to be added in the future.

One of the key advantages of simulation-based training is the reduction—by up to 40%—of the number of real flight hours required for training, instruction, and qualification of aircrews.

This type of training also enhances operational safety and helps reduce operating and maintenance costs, both in terms of helicopter technical servicing and fuel consumption, as well as wear and tear on materials, thereby increasing helicopter availability for medical rescue missions.

The system is equipped with a projection system based on 4LED technology, which introduces a fourth infrared light channel, enabling pilots to train using night vision goggles (NVG) while improving image quality. Realism is further enhanced by a highly detailed database of Poland, covering all LPR operational areas—including airports, helipads, hospitals, and other take-off and landing sites—as well as all scenarios required for HEMS (Helicopter Emergency Medical Service) mission training carried out by LPR, both day and night and under various weather conditions.

The EC135 is one of the most successful light twin-engine helicopters worldwide, widely used in police, medical, and corporate transport operations. The H135 family includes more than 1,600 aircraft delivered to over 300 operators worldwide.

The investment is being carried out under Project No. FENX.06.01-IP.03-0001/24, entitled “Acquisition and installation of a Level D Full Flight Simulator (FFS) helicopter training device, together with the construction of training facilities for LPR operational personnel,” within Action FENX.06.01 Health System, Priority FENX.06 Health, of the European Funds for Infrastructure, Climate and Environment Programme 2021–2027.

### About Indra Group

Indra Group (<https://www.indragroup.com/>) is the foremost Spanish multinational and one of the leading European companies that focus on defence and advanced digitalization. It stands at the forefront of the defence, space, air traffic management, mobility, and transformative technologies through Minsait, and it integrates its sovereign AI, cybersecurity and cyberdefence capabilities into IndraMind. Indra Group is paving the way to a more secure and better-connected future through innovative solutions, trusted relationships and the very best talent. Sustainability is an integral part of its strategy and culture in order to overcome current and future social and environmental challenges. At the close of the 2025 financial year, Indra Group posted revenues of € 5.457 billion and had a local presence in 46 countries and business operations in over 140 countries.

### About NDI

Fundusze Europejskie  
dla Rozwoju Społecznego

Rzeczpospolita  
Polska

Dofinansowane przez  
Unię Europejską

NDI is a Polish capital group operating since 1991 in nearly all areas of construction. The company is guided by values it has upheld from the outset: integrity, reliability, and strong interpersonal relationships. NDI believes that business success is measured not only by financial results but above all by the trust of its clients and employees.

Today, NDI is a modern and socially responsible organization employing over 700 people. It combines extensive experience with numerous achievements, with a portfolio that includes many complex and high-profile engineering projects. Its core activities include infrastructure, building, and hydrotechnical construction, complemented by projects in real estate and energy. As a general contractor, NDI delivers projects across virtually all sectors, serving both private and public clients.
